

@Model vs @model **ст капитал леттер**

@viewbag / @viewdata / @tempdata

Viewbag is dynamic data

Viewdata to accessin data in runtime without no typechecking

Tempdata is a session and store data between two consecutive request or between actions

ViewData is a dictionary and accessibe to object by string as key (is a key/value collection)

Viewbag is a dynamic property ViewDataDictionaryClass to Get/Set value without conversion to strong types

partial view **пашиал**

you no longer see a border

we have add a some kinds of route

we will examine model binding
